THE FLEETLINK SOLUTION

Trunked radio was developed to alleviate some of the problems that small to medium sized two-way users experienced with shared conventional radio. By grouping several trunked radio channels together, users now have greatly improved communications systems.

Benefits include fast access times, privacy from other users and enhanced reliability due to multiple channels. FLEETLINK takes a standard trunked network one step further by operating from multiple linked repeater sites, therefore allowing seamless wide area operation.

We at Gencom FLEETLINK, provide two-way communications to a wide variety of users. For any business with a high degree of internal communications, the FLEETLINK trunked radio network is one of the most cost effective mobile communications systems available.

COVERAGE

Any communication system is only as good as the transmission sites from which it operates. Gencom FLEETLINK system is located on only the best sites throughout the Hunter region to ensure maximum coverage. From Sydney to Port Stephens and throughout the Hunter to Scone.

EQUIPMENT

We sell only the highest quality products and accessories onto the system. Both hand held and in-vehicle units are available. For those companies not wishing to purchase new equipment, we have a range of fully reconditioned second hand radios, which are available for purchase or rental.

AFFORDABLE SYSTEM

Unlike other systems where all costs are charged on a timed basis, the FLEETLINK system is billed on a monthly flat rate fee with no individual call charges. In today's competitive business environment, fixed costs are a real advantage.

Standard network features include private individual calls; group calls, calling party identification, call queuing and status messaging. FLEETLINK is also an ideal platform for mobile data GPS applications.

COMMITMENT TO SERVICE

As a leading Hunter communications company, we are 100% committed to the system service and support. With such a degree of infrastructure investment we demand nothing less. No other company matches our reputation for providing the highest quality two-way radio services in the Hunter.

This information was correct at the time of publication. But, it is subject to change without notice. Please note that coverage information is indicative and as with any wireless communication network there may be places within the area where coverage is not possible.
