THE FASTRUNK SOLUTION

Trunked radio was developed to alleviate some of the problems that small to medium sized two-way users experienced with shared conventional radio. By grouping several trunked radio channels together, users now have a greatly improved communications system that delivers almost instantaneous access and full privacy for the entire workgroup – at an affordable price.

Our Fastrunk Multi-ax System provides two-way communications to a wide variety of users. For any business with a high degree of internal communications, the Fastrunk trunked radio system is by far and away the most cost effective method of communication available.

COVERAGE

Any communication system is only as good as the radio transmission site from which it operates. Our Fastrunk System is located on the regions best tower site – Mt Sugarloaf. With an elevation of 400 metres above sea level, no other site can offer the expansive coverage. From The Entrance to Port Stephens and Newcastle to the Hunter Valley, our Fastrunk has got you covered.

EQUIPMENT

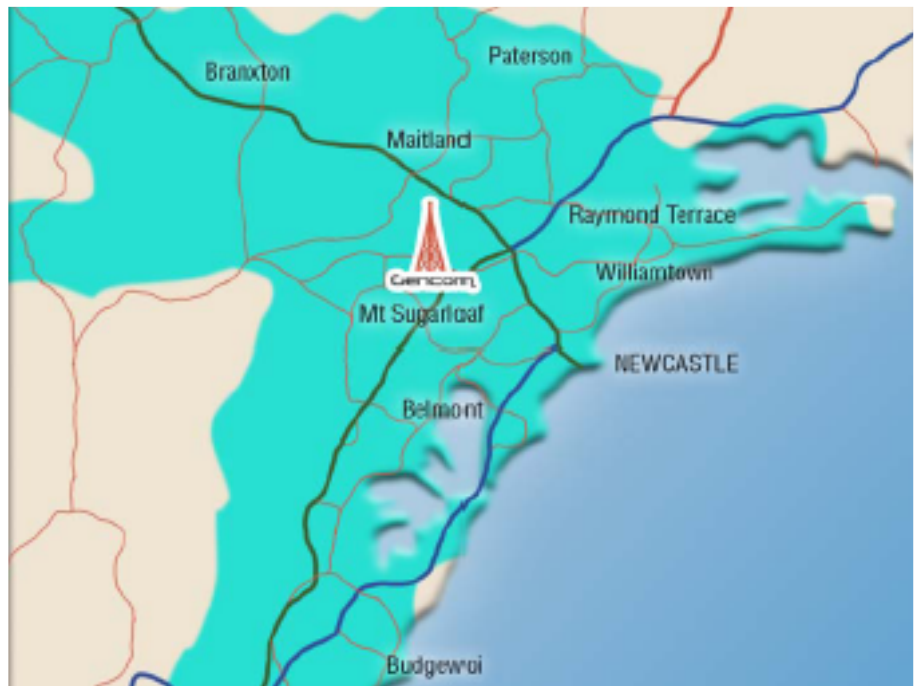

We market and support the highest quality products and accessories. Both handheld and in vehicle units are available. For cost conscious clients, we carry a range of fully reconditioned second hand units.

AFFORDABLE SYSTEMS

Unlike other systems where call costs are charged on a timed basis, the Fastrunk system is billed on a monthly flat rate fee with no time limits. In today's business environment, fixed costs are a real advantage. With a low monthly access fee per unit, no other system gives you such value for money for unlimited talk time. Another unique benefit of the systems is its ease of use. With the single push of a button, users have instant access to their entire fleet. The advantage of "push to talk" operation is in the speed and efficiency of communications.

COMMITMENT TO SERVICE

As a leading Hunter company, we are 100% committed to the systems service and support. With such a degree of infrastructure investment we demand nothing less. No other company matches our reputation for providing the highest quality 2-way radio services in the Hunter.

This information was correct at the time of publication. But, it is subject to change without notice. Please note that coverage information is indicative and as with any wireless communication network there may be places within the area where coverage is not possible.
